RESEARCH EXPERIENCE

Stanford University, 450 Jane Stanford Way Stanford, CA 94305–2004
Department of Computer Science Zou's Group Choi's xlab *June, 2025 – current*
Research Assistant, Advisor: Prof. James Zou and Prof. Yejin Choi
Project: In-the-Flow Agentic System Optimization [arxiv] [website]

- Introduce AgentFlow, a trainable tool-integrated agentic system to overcome the scalability and generalization limits of today's tool-augmented reasoning approaches.
- Pioneer a novel RL paradigm to directly optimize the agent within the system in an online fashion.
- Achieve strong performance on 10 benchmarks with a 7B backbone: +14.9% search, +14.0% agentic, +14.5% math, +4.1% scientific tasks; **surpassing larger-scale models like GPT-4o**.

University of Waterloo, 200 University Ave. West, Waterloo, Ontario
Department of Computer Science TIGER-AI-Lab *February, 2025 – current*
Research Assistant, Advisor: Prof. Wenhu Chen
Project: Agentic Tool-Use LLMs through RL [arXiv] [code]

- Propose a novel agentic async tool-use RL training framework.
- Achieve strong performance across diverse benchmarks, including math and search tasks.
- **Open-source tool-agent training framework Verl-Tool (500+ stars now)** and submit work to ICLR 2026.

Kuaishou, Haidian District, Beijing
Machine Learning Researcher *October, 2024 – February, 2025*
Project: Generative Personalized Re-ranking Recommendation

- Develop an end-to-end generative training framework for re-ranking recommendations powered by LLM, enhancing Recommendation System generalization and personalization.

- Deliver significant online gains on Kuaishou (300 M+ DAUs) and recognized as an excellent LR (launch review).
- **Accepted by CIKM 2025**.

Emory University, 201 Dowman Dr, Atlanta, GA 30322
Department of Computer Science *March, 2024 – October, 2024*
Research Assistant, Advisor: Prof. Liang Zhao
Project: LLMs for Textual Graph Mining [arXiv] [code]

- Propose a novel framework for link prediction on textual-edge graphs by jointly leveraging graph topology and semantic information. The method integrates coherent document composition and LLM-enhanced self-supervised training to equip GNNs with language understanding.
- Conduct extensive experiments on four real-world datasets, demonstrating that our method boosts the performance of general GNNs and achieves competitive results compared to edge-aware GNNs.
- **Accepted by NeurIPS 2024**.
